                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Purpularizational transport plants - containing genes encoding intracellular chiticians and beta.1.3-glucomass programmes 25, 43pp. 1991ish.

Parample 5; Plant 1991ish.

This Dab sequence encodes an extracellular beta.1.3-glucomass which is used to construct a transport in a novel method to produce plants resistant to finish action. The plant chiticians gene and a plant beta.1.3-glucomase gene within its tisoups are predicted to exhibit improved resistance to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 301

                                               Likray in expression vector pRESI. Ows used to transform Saccharcoyces crevisies Will4, and excelutionser-positive vector crevisies Will4, and excelutionser-positive colonies. I.e. DSM 9944 and DSM 9945, and plasmid inserts were sequenced to isolate the 2000 and 2139 by sequence. The DSM 100 and 2139 by sequence and the produce pure, recombinant excelutionse can be used to produce pure, recombinant excelutionse and transformed and are projected against passe succeptible the ensymmetries are projected against passe succeptible the ensymmetries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-08-887-977-9.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            plants with improved resistance to pathogenic fund; - contains over-expression targetted to apoplants over-expression targetted to apoplants over-expression targetted to apoplants. This sequence was isolated from a Kitabaem CDM illuray following pressing with a partial tobacco beta,1,3 glucanae clone. The gene is adduced to encode an amain acid a equence admittal to that of the tobacco extracellular beta,1,3 glucanaes plass. The unclockid sequence can be inserted into an appropriate plassia for production can be also an expression of the partial to a partial to a proper sequence and a large plants having resistance to fungal pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DESULT 300

                                                                                                                                                                  CONTRIBUTED TO THE REALT SITE OF THE CONTRIBUTES. ONE accombinant plant dended contained a 6.4th ineart coding for the Abil 105 mentalment of This plannid was designated pilolos. A 100pm beconv. Abil 105 mentalment over excitent from pilolos and the religated pilolos. Tab insert transpense of 5.7th insert was pertially sequenced and found to contain 4 open reading frames, one of Which concess the transpense from insertion sequence 1581. The sequence cycle here is that of ORFJ, which codes for a protein involved in the barteriophage residence mentalment, part of the 1581 the containing planting frames. And the sequence of the inverted types (15) sequences of the 1581 sequence and one of the inverted types (15) sequences of the containing planting the sequences of the containing planting to the containing planting to the containing planting to the containing planting to the containing planting the containing the containing the containing planting the containing the contai

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT: 312

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        THE WORKUNDSA.

FORT THE STATE OF THE STATE OF A THE STATE OF THE STAT
                                                                                                                                                                                                                                                                       CC DDM library, to identify a 2.1 kb fragment encoding a seroid CC 5-liphs reductate of 159 amino acids. The invention also coners CC fragments of the human-terived sequence as well as considering commission of the reductate and by site-directed mutagemesis. SC sequence 2107 B9: 475 A; 482 C; 486 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ouery Match 1.34; Score 14; DB 3; Length 2107; Bet Local Similarity 100 04; Pred. PROCOSE * Where the sequences are useful in e.g. analysis of normal recombinant and abnormal sequences are useful in e.g. analysis of normal recombinant and abnormal sexual differentiation and abnormal sexual differentiation of season of testosterone to that a sequences engines earlyse the conversion of testosterone to chink operations of supplies of all purities of sequences converses one to make iterated and purities. The human engine constructed for the large construction of SHO3A or as probes for engine for the large of normal and abnormal sexual differentiation. Design processes of normal and abnormal sexual differentiation. Design processes of normal and processes of normal and processes of the processes of the sequences of normal and processes of sequence and processes of the processes of the sequence and processes of the sequence of normal and endomentations of sequence in translations and endomentations of sequence 2007 BP: 455 A; 482 C; 486 G; 664 T; 664 T.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ouery Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     in screening, disgnostics and the arguetics
Disclosure: Page 147-147, 180pp; English: English: The TARY-Miding protein associated forcor hravillo (including protein associated forcor hravillo) (during the district antibod size and this no products) are used in dung screening, disgnostics and therapoutics. They are used in the development of proticio inclemental assays for extreming compounds that agonise or netgoins estimated than man parboloy.

polymerase II in vitro transcription activity. The encoded protein has a streamtion mainten; or puritied years place; where transcription by RAM polymerase III, the RAM polymerase III transcription proceeds in vitro upon addition of several unclear fractions designated TRIA, B. D. E. F. H. I and to RAM polymerase II thousanges. Fraction FIID, has been shown to contains a TPP and other TAMS: Puritication of FIID has been shown to several processes and shown to set the components reveals Proteins resigning in size from 30-250 kD. Set missined against the FIID fraction allowed cloning of the correspondence 2152 RD; 627 A. 449 C. E. 556 G. S40 T.

```
CC A Typodil genomic library in REMBL3 was screened with a fragment of a typodil genomic library in REMBL3 was screened with a fragment of a close isolated by immunoscreening a Typodil strain RH cDNA.
C close isolated by immunoscreening a Typodil strain RH cDNA.
CC library Genomic close Graz-REMBL3 contg. an insert which cencedes the complete 28 SAD satisfan was identified. The antigen is encodes the complete 28 SAD satisfan was identified. The antigen is close the principal excretion-excretion antigen of Typodil tenhysoites.
CC and represents a 9000 candidate for effective vaccine production.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULY 1049052 standard: DNA; 2190 BP.
AC 049052 standard: DNA; 2190 BP.
Caranila codding sequence.
DE Crannila codding sequence.

```
The sequence was obtd. from the longest of the alpha 1 gp. of v-pA. clones isolated from a ONA library preed, from RMA from the salivary glands of vampixe hate. The v-PA protein produced on expression of the gene is a high molecular form consisting of a finger domain, an EGP domain, a Kinger domain and a finger domain, an EGP domain, a Kinger domain and a finger seals of SGR4-005576, and the seals of SGR4-005576, and the seals of SGR4-005576.

a fragment of the giveraldehyde-1-phosphate dehydrogenase (GADDH) gene (Trac Porticillium And 27 Ar fragment of present of present of the profile of give port. A 665 bp Hantiff and the profile of give port. A 665 bp Hantiff and tracment of this was used to acreen constant DNA to identify a DNA regener (GVAZI) containing the GADDH promote. A sequence (GVAZI) containing the GADDH promote of the genomic graph a bloated from a containing the GADDH promote of the genomic graph attortive a containing the GADDH promote of the genomic graph attortive in Target of the genomic graph structural state of the genomic graph promote in the first of the genomic graph promote in the first of the genomic graph promote and the graph genome are also as a section of the genomic graph genome and the graph genome are also as a first of the graph graph

Call and 9. Fig 10. 44pp; English.

Claim 9. Fig 10. 44pp; English.

Claim 9. Fig 10. 44pp; English.

Lincorporated into note; gene constructe and to inhibit cell.

Encytexion in Lapetum tissue and hence to produce make sterile

plants. Vector Regil was constructed in which the Resil promoter

to was used to control expression of the make T-uril gene (see also

Tob934). Ancho codes for a procein that inhibits cell respiration,

To resulting in cell death. The vector was used to transform make

coll cultures. Sheepquent plants

C transformed, make sterile plants.

C transformed, make sterile plants. 21.-UIL-1996; GO1675.

that exhibits activity against a broad range of intestinal and opportunistic pethodens. Ret cryptdin. 7. 4. and 3 genes (see proportionatic pethodens. Ret cryptdin. 9 genes, charlest of 19738) were isolated from a Spraque-Dawley genes, charlest chord in EDBL. The cryptdin. 9 gene, or corresponding CDNA (see also 730734), can be used to produce large amounts of cryptdin. 2 for use in treating inflammatory sequence 2408 BP; 640 A; 531 C; 557 G; 680 T; 888888888

cpds. for opioid (ant)agonist activity
Example: F98 #8: 740; Engilsh:
To Acolate oplate receptor genomic clones, 300,000 human genomic
clones and a similar number of bouse genomic coince were probed
with the 1.1 Me mouse delta opioid receptor clone DNR-1 Far/XBaI
fragment. One mouse clone and three human genomic clones were
isolated the 1 mann clones had were fargemented for the second probability of the contract that three different genes were represented by the
human genomic clones which were designated #3, #14 and #20. H maps
contracted and the mann and proposed and the processor.

To chromosome 8. It encodes the human kape opioid receptor:

Prescribed and constroyen receptor beta - used to develop prodes for treating and constroyen. OSS diseases, osteoprories or cardiovascular fracting G. cancers. CSS diseases, osteoprories or cardiovascular fractions for the constroyen sectors. CSS diseases, osteoprories of the cardiomatical forms (TAMIN) and the cardiomatical first beta. A set of cardiomatical primary based on conserved sequences of the DNA.

CC degenerate primary based on conserved sequences of the DNA.

CC degenerate primary prostate cDNA. The PCR prod. was used to cused to emplify rat prostate cDNA. The PCR prod. was used to conserved and mann ergis cDNA. The PCR prod. was used to conserve a man prostate cDNA. The PCR prod. was used to conserve a mann resist cDNA. Ideary of this was used to conserve and thouse of prostate cDNA.

CC despensable and the prostate cDNA. The PCR prod. was used to construct the conserved of the cons

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Callulase coding DNA sequence - can produce cellulase by blo-cepineering method
Claim 1, Pig 1; 7pp; Japanese.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     identified. Primers based on a DRA sequence (709969) showing homology to the towns DE 4 gene allowed the 5 and 3 be end of the respect 78 gene to be isolated, and additional raspbarry B4 gene sequences were obta. By hyphidisation screening of genemic library clones, to provide the genomic elements. The B4 gene promoter can be tested for regulatable expression of heterologous genes in sequence 2008 BP; 860 A; 483 C; 537 G; 824 T;

 This represents the plot CHNM securior. This cDNM was isolated using probes designed using fragments of the plot aminor cid serges can be calso Shidis-17). The protein plot as a tumour approach or product which is involved in cell oycle regulatory activity plot has been shown to be structurally add functionally staines to the protein of the returbulation and cellular proteins at a binding domain designated the 'plot pocket' the plot pocket can perform a T-plot binding function and a EAA-plot binding function and a EAA-plot binding function and a EAA-plot securing their respective 'pocket's but very little incomblogy outside this sequence 7808 Bp or day sequence has been decided to 764 Tr. Sequence 2808 Bp or day sequence has been cloud to map to 704 III.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A genetically isolated group of families with autosomal dominant care anily-onset Allahemer's Disasee (AD) (the Volge German Kindreds has been studied and initial mapping analyses have predicted the AD4 cores resides on Chomosome 1. A 1.5 K tragment of DNA from the AD4 cores resides on Chomosome 1. A 1.5 K tragment of DNA from the AD4 gene and was amplified from VKC 921d12 DNA and was redolabelled by the entire AD4 gene and was formed and sublomed into Milangi Vector for sequence analysis. The sequences of the AD4 gene in AD4 gene is an externited in Publishing Union sequence analysis. The sequences of the ID4 gene, identified in Volga Christian and AD4 gene, identified in Volga Christian and Midreller's Disease, sepecially a matching was associated with Albahemer's Disease, sepecially a Christian with problem of matching and any analysis of the AD4 gene, identified in Volga Christian and AD4 which replaces has by its Detection of matching and any and any analysis of the AD4 gene, identified in Volga Christian and AD4 gene, identified in Volga Graduence and AD4 gene, identified in Volga Christian and AD4 gene, identified in Volga Graduence aning Graduence and AD4 gene, identified in Volga Graduence and AD4 gene, identified in Volga Gr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

Immunoassay and mRNA hybridisation assay for beta-5 protein - useful for the detection of carcinoma(s) and to distinguish different cell
                                                                                                                                             types (limin 11. Columns 11-20; 21pp; English. The present sequence encodes the human integrin beta subunit protein, beta-5, which is found in carcinomas but not in lymphol cells. An immunosasy for the detection of beta-5, comprises contacting a sample with a monoclonal antibody (Ab) which bluds occurred the a sample with a monoclonal antibody (Ab) which bluds neptrope of beta-5 and them with a labellad Ab blind bluds another epitrope of beta-5 and detecting any bound label. An assay for the beta-5 and detecting any bound label. An assay for hybridising to the beta-5 chy, and determining if binding has cocurred. These assays are useful for detecting carcinoma, and for distingialing pattern different cell types.

Tumour suppressor ptb2/pl10 gene intron and promoter sequences - used for the disposas and prognosis of cancer and predicting predicting predicting to cancer progness of cancer and prognosis of the cancer progness to the cancer progness of the cancer progness of the cancer progness of the cancer progness of the cancer than a particular than the progness of the progression. The gene was isolated from a blancent of library using primers (see 19687-98) based on the published obly sequence, with the 5' inhaling region obtained from a placenta of sequence, with the 5' inhaling region obtained from a placenta of sequence, with the 5' inhaling region obtained from a placenta of a progness in a patient and be determined and used to: (1) determine a smaple from a patient can be determined and used to: (1) determine a smaple from a patient can be determined and used to: (1) determine of the progness of the present of cancer the investigation in a tensor of the progness of the progness of the progness of the present of cancer the investigation progness of the progn

 directed to the c-abl gene can be used to selectively inhibit the expression c-Abl following exposure of cells to a Disk damaging agent such as Londaria gradition or antomycin c. When used in combination with DNA damaging series, the articlemes KNA provides a spression cell killing effect useful for killing salignate cells in cancer tremment.

Disclosure, Seconding a Toxin Which is settly significated and se esquences encoding a Toxin Which is settly. PSITA, 1943).
SSTAL, PSISOL, PSISOL MAN PSICO ere given in 030803-03 and 030802-13 respectively. The toxin is a delta-endotoxin actives against acasid peats, including the Two Spected Spider miter. The leadstee can be losed against non-phytophagus mittes such as acasid peats of large to the settly of the settl

1062 is the set between extin gene. This gene is amplified by the 1062 is the set between 67004s. The primers are used specifically for the treeting and isolation of this sequence. They have the divantage of sensitivity and reliability and are useful in the pharmsceutical.

The methods can be used to identify differences between pig alleles associated with inspersements in production traits, and in marker associated with inspersements in production traits, and in marker associated with inspersements in production traits, and in marker associated dentification/decleration of pigs. The FFRAP person and also be used to make production or physiological characteristics. Sectific an latel proteins or peptides may also be produced from the production or physiological characteristics. Sectific an latel proteins or peptides may also be produced from the marker of alleles of the proteins or peptides may also be produced from the proteins or peptides may also be produced from the deposition of allele proteins/fragments. For reduction is casted from of allele proteins/fragments. For reduction is casted and allele proteins of interest in lasm mark. But the proteins of interest in lasm mark, but the protein of allele proteins/fragments. For reduction is considered and deposition in the protein of the protein of the protein of allele proteins of the production and deposition is reducted the production and deposition is energy from united deposition of the protein of a superprophism of the profession of the properse, e.g. analysis of body weight gain and certificate programme of the production difference in BW, and a distinct but not estimated as admitted halfiger of the production of deposition in the protein of the protein of the production of deposition is reducted by an allysis of body weight the force associated proteins of sequence 5042 BP; 11255 A; 11291 G; 1127 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Owery Match

CC The S. vedmorensis fosfomycin blosynthesis related gene 706001, encodes the methylation (HT) and epoxylation (EP) enayuse 883167 and CR 883168, respectively. By cloning and integrating clusters of the HT CC and EP enzyme genes in S. vedmorensis BPP/PR9623 (PERP P-1346), respectively present to the pheson of the Present CR 14 and Present Present CR 14

Claim 13; Fig 11; 131pp; English.

This sequence represents the coding equence for the brosophila maintegrater. Titlefeas (TRM) protein. This sequence also encodes the maintegrater. This is no lociar transforation protein (FTP) of the maintegrater. This is no lociar transforation protein (FTP) of the protein involved in circadian rhythms, and organization preterns cratter to the attep-wake cycle. The MTP is also preferably 11ght maintain, and has a stablishing effect on the circadian rhythm protein. FTF also preferably 11ght maintain to environmental cycle of 11ght. This has specific binding entitle for the process of circadian rhythm continues a stablishing state of the process of circadian rhythm the short of the process of circadian rhythm and the process of an expensional and circadian rhythm and a depression, manoparated with containers of a circadian rhythm and has depression, natolic properties and circadian rhythm and has depression, natolic properties of the circadian rhythm and has depression, natolic properties of the circadian rhythm and has depression, natolic process of circadian rhythm and has depression, natolic products and an also be used for detecting and/or treating of the circadian rhythm and has depression, natolic products can also be used for detecting and/or measuring to conditions as as to classify groups of individuals with the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                generated based on the amino acid sequence of the purified protein (R7434). The resulting fragment was used as probe to obtain the complex DNA sequence (1982). The protein or bacteria producing the protein, can be used to produce optic failto objects that the protein can be used to produce optic failto objects that the protein can be used to produce of the protein can be used to produce objects contained. I fructose algosecolaride and insulin.

                                                                                                                                                                                                                          cc epidermal cells and DNA sequences encoding p35 and p40 subunits of cc 11-13 to target cells in Yero. Delivary of the construct allows cc 11-13 to target cells in Yero. Delivary of the construct allows cc 11-13 targets in Or treatment of solid metastatic or disseminated cumours. The treatment is constructed early early when the question construct is editorated to a site distant from the tumour. G10 A, 1610 C; 1568 G; 1507 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       / trg / 4 / trg

regenera (19474-44), and a second set which suplifies highly conserved sequences present in the catalytic demain of the c-kit ambraroup of Para (19475-46). The PIX genes identified are described in (4947-77 and 84189-02.

SLL-51 is expressed in several magnaty-orgic cell lines, but not in exprisoid cell lines. The SAL-51 expression prod. exhibited a significant sequence monology with known posterin typosic Kinases of the FIX/FIX family. The partial and fill-length SAL-51 gene sequence are given in 1555 And 1665 or 1746 1560 T;

misc_binding

detection of the mutation by PCR amplification or hybridisation methods

detection of the mutation by DCR amplification or hybridisation are michods

Frample 1. Column 23-30, 71pp. English.

CE This sequence encodes human inchoopin, and is shown in full with circums. The corresponding sequence without introns is shown in cort introns. The corresponding sequence without introns is shown in cort of principle are position 31 by substitution of C with A in cet of position are position 31 by substitution of C with A in cet of position, make in a position of absent columnic selection.

CC conformation, make in 11177 at a substitution of C with A in cetting control of the columnic selection of the columnic select

cc polypeptide (GAC), polymerase (PCL) and envelope (EAV) proteins. These cc proteins can be used to develop vital vaccines, nuiseen nousic acids. cc theorypes and other anitytal agents. They can also be used in cc transplantation technology and sa diagnostic roots are transplantation technology and sa diagnostic roots. 35 sequence 8196 BP; 2165 A; 7051 C; 2147 G; 1820 T;

UB-08-887-977-9.mg Value Value	This sequences codes for the protein that apecifically binds to the enhancer of the alpha fetoprotein deee. This branch be useful for the product of the alpha fetoprotein about an entitle for the product of the alpha fetoprotein by inserting this bux into the product of the alpha fetoprotein by inserting this bux into the product of an originate fetup protein bloodylally active protein by a product of a product of an originate fetup protein promoter under the control of alpha fetoprotein gene manager and promoter under the control of alpha fetoprotein gene manager and product of a small of a second

PA DAG Coding for portine interleukin 1-beta - and new recombinant proportine interleukin 1-beta useful as growth factor and the proteine interleukin 1-beta useful as growth factor and the proteine interleukin 1-beta useful as growth factor and the genomic DNA sequence coding for portine interleukin-1 beta was CC The genomic DNA sequence coding for portine interleukin-1 beta was CC The a metabolic growth factor in healthy pigs. e.g. modifying glucose turnover, energy consumption and lipid metabolism. It is also useful cc as an immunostilulant, esp. as a vectine aduluvant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ESSULT 578
